         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB

The GMG DNA and protein sequences of the invention may also be used as insulin sensitisers - for improving insulin sensitivity in persons with non-insulin dependent diabetes mellitus. The present cDNA sequence encodes the human GMG-9 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises the amino acid and coding sequences of six human genset metabolic genes (GMG-7A, GMG-7B, GMG-9, GMG-9, GMG-10 and GMG-11). The GMG DNA and protein sequences of the invention are useful for treating or preventing metabolic-related disorders, such as: obesity; impaired glucose tolerance; insulin resistance; Syndrome X; Type II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
